

GGS Erosion Snake

The GGS Erosion Snake was designed as an effective and economical product for sediment control on construction sites. The durable construction the GGS Erosion Snake installs in minutes. Other uses include silt dike type structures, diversion dikes, continuous barrier, temporary ditch liner, slope interruption device, stream and pond protection. The filter mixture is 100% shredded rubber in one of two sized particles. The recycled material is approximately ¾" or 2" in size. The rubber mixture is held inside a UV stabilized woven geotextile.

Physical Properties

Snake Size	9.5" diameter
Snake Length	7' or 10'
Functional Longevity (Months)	24
Fabric Permeability (cm/sec)	0.05
Fabric UV Resistance (%@500hrs)	70
